PREFACE

Dear Users,

The release "Census Results by Settlement", published after the publication of Census results in Republika Srpska, presents data at the settlement level.

The release provides data on the population by age and by sex, by five year age groups, as well as data on households, by number of household members.

In other words, this release presents reliable data on the life of Republika Srpska citizens, aggregated at the level of a settlement as the basic organizational unit of the population in local communities of Republika Srpska.

2. Households by number of household members, by settlement.....	145

METHODOLOGICAL EXPLANATIONS

What is Census?

The Census is defined as the statistical survey that produces at regular intervals (usually every ten years) the official counting of the population, households and dwellings in the territory of a country.

The main objective of the Census is to provide a relevant set of data on the number and geographic distribution of the population and its demographic, socio-economic, cultural and other characteristics, which serve in the preparation and implementation of development plans in all areas of the social and economic life.

In addition, the Census serves to collect a significant fund of data on the number, type, location, occupancy status, age and other characteristics of conventional dwellings and housing arrangements, as well as data on the most significant characteristics in terms of agricultural capacities owned and used by individual households.

Given the number of units to be enumerated and the number and diversity of modalities in questions, the Census represents the most complex statistical survey that requires substantial financial resources and a specific organization (outside the framework of regular statistical surveys).

The Census includes the process of collecting data through fieldwork, data processing, aggregating individual information, and evaluation, dissemination and analysis of data.

Duration of enumeration

The enumeration of population, households and dwellings in Republika Srpska and BiH began on 1 October 2013 at 9 AM and it was completed on 15 October 2013 at 9 PM.

Legal framework

The Census of Population, Households and Dwellings 2013 was carried out in accordance with the Law on Census of Population, Households and Dwellings BiH 2013 ("Official Gazette of BiH", No. 10/12 and 18/13), the Law on Organization and Implementation of the Census of Population, Households and Dwellings 2013 in Republika Srpska ("Official Gazette of Republika Srpska", No. 70/12 and 39/13) and the Law on Processing and Publication of Results of the Census of Population, Households and Dwellings 2013 in Republika Srpska ("Official Gazette of Republika Srpska", No. 82/16). These legal acts regulate the content, preparation, organization and implementation of the Census, duties and obligations of Census participants, duration of enumeration, processing and storage of data, financing of the Census, penalty provisions, and publication of data.

Territorial organization

The Census on the territory of Republika Srpska has been published in line with the administrative-territorial organization of Republika Srpska, pursuant to the Law on Territorial Organization of Republika Srpska ("Official Gazette of Republika Srpska", No. 69/09 and 70/12) and the Decree on Settlements making up the Territory of the Local Self-Government Unit ("Official Gazette of Republika Srpska", No. 4/10, 26/11 and 74/12). According to the said administrative organization, which due to the Census activities could not have been changed in the period between 1 January 2013 and 31 December 2013, Republika Srpska had 6 cities, 57 municipalities and 2,756 settlements.

Settlement¹

A settlement is part of the territory of the local self-government unit, with constructed buildings for housing, basic utilities and other facilities required to meet the needs of the population inhabiting the settlement on their territory.

This publication does not cover settlements with no inhabitants, that is, settlements in which the number of citizens is 0.

Method of enumeration

The Census 2013 was conducted in the traditional way, through interviews, following the "door-to-door" principle. Enumeration was carried out using Census questionnaires, namely the Personal Questionnaire (Questionnaire P-1) and the Household and Dwelling Questionnaire (Questionnaire P-2).

Data confidentiality

Article 15, paragraph 2. of the Law on Census of Population, Households and Dwellings in BiH 2013 stipulates that the protection of personal data shall be provided in accordance with the Law on Personal Data Protection and the Law on Statistics of BiH.

Data confidentiality is also regulated by the Law on Statistics of Republika Srpska.

¹ The definition of a settlement was taken over from the Law on Territorial Organization of Republika Srpska ("Official Gazette of Republika Srpska", No. 69/09 and 70/12)

GENERAL PART

Age and sex

Age and sex structure of the population represents the most important demographic characteristic of any population. Structure of the population by age and sex is formed over a long period of time, under the direct influence of fertility and mortality trends, as well as migratory flows of the population.

Based on data on these characteristics, some very important population clusters are determined, such as: preschool and primary school children (under 15 years of age), workforce (15 to 64 years), female fertile population (15 to 49 years), children population (under 18 years of age), adult population (18 years and over), etc. In addition, data on age and sex structure of the population represent a basis for the development of various strategies and policies dealing with aging, the youth, education, improving women's status in the society, violence prevention, protection of children, etc.

Method of collecting data on age and sex

According to international recommendations, age and sex are among the so-called core topics, i.e. the topics that must be included in the content of main census questionnaires. Given their importance and the fact that these characteristics are required to fully observe all other important characteristics of the population (economic activity, educational attainment, marital status, birth rate, migration, etc.), collected information about age and sex must be as complete and as accurate as possible.

Age

The data on age in the Census 2013 were obtained using answers to the question on the date, month and year of birth. Based on these answers, completed years of age of each person were calculated during the processing of Census material

	DAY	MONTH	YEAR	THE LAST 6 DIGITS OF THE PIN
Date of Birth and PIN	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Sex

Sex is a demographic characteristic collected in each census of population. If no answer to the question regarding sex was available for a person in the P-1 Census Questionnaire, during the processing of Census material the answer was imputed based on other data on the person (name, unique identification number of citizens, birth years of liveborn children, relation to the household head, or status in the family, etc.).

	Male	Female
Sex	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Households

According to international recommendations, a household is a core census topic, while the question on the number of household members belongs to derived core topics, i.e. the topics that ought to be derived through the processing of Census data. In the world, there are two concepts that are applied in defining **private households**. According to the so-called Housekeeping concept, which is applied in our country, a household refers to persons living together who make common provision for essentials for living (food, housing, etc.). A household may be a one-person household (one person living alone in a dwelling or a part thereof, who makes provision for his/her own needs) and a multi-person household (a group of two or more persons, related or unrelated, who make common provision for food and housing). A dwelling may be occupied by one or more households.
